

## Microsoft Exchange 2010

Reduce costs, protect communications and improve productivity.

Building on capabilities of Microsoft Exchange Server 2007, soon to be released Exchange 2010 raises the bar, helping companies reduce costs, protect communications and improve productivity.

### New Features:

#### Reliable options for delivery, administration & availability.

- Choice of solution delivery whether on-site, as a service or combination
- Role-based administration
- Self service capabilities allowing users to perform common tasks without calling help desk
- Unified platform for high availability and disaster recovery
- Lower-cost direct-attached storage

#### Powerful tools for protection and compliance.

- E-mail archiving and more powerful retention policies
- New transport rules for automated protection of e-mail
- Multi-mailbox search through a straightforward web-based interface
- Built-in defenses against viruses and junk email

#### Enhanced anywhere access features.

- Voice mail with text preview
- Unique call answering and routing rules based on Caller ID
- Phone-based access to email, calendar and contacts
- Email mute function allowing users to remove themselves from irrelevant email strings
- Updated conversation view combining related emails
- Shared free/busy calendar details with external partners for fast, efficient scheduling
- MailTips helping users send more effective messages
